PROJECTS

Kanban Board
- Kanban board projects facilitate task management and workflow visualization in Html, css, javascript, Material UI ,React and Recoil. They consist of a board with columns representing different stages of work like Todo, progress and done. Cards move across columns as tasks progress through the workflow.The board provides a real-time visual representation of the project status.

Twitter-Clone
- Build Twitter clone app to allows users to create accounts and profiles with use of Html, css, javascript and React and recoil. Users can post short messages called "tweets". The app supports following other users for new tweets.Users can like, retweet, and reply to tweets. It features a news feed that displays tweets.

Youtube
- This app integrates the YouTube API to access data from the original platform use with React, Html, css javascript and Material UI.Users can browse and search for videos within the app using keywords or filters. It allows users to watch videos directly within the app's interface.By leveraging the YouTube API, my app offers a familiar YouTube-like environment while customizing features to meet user preferences.
